Is Docker Swarm automatically enabled?

No, by default, Docker Swarm is not available

What are the types of nodes in a Docker swarm?

Manager and worker

How do you enable the first node of a Docker Swarm?

docker swarm init

How do you list running services?

docker service ls

How do you add a node to a swarm cluster?

docker swarm join —token <token> —listen-addr <ip:port>

Can manager nodes run containers?

Yes, manager nodes normally run containers

How do you retrieve the join token?

docker swarm join-token

How do you list nodes in a cluster?

docker node ls

Can you run 'docker node ls' from a worker node?

No. Docker Swarm commands can only be run from manager nodes

How do you list services in a Docker swarm?

docker service ls

How do you list containers in a service?

docker service ps <service name>

How do you remove a service?

docker service rm <service name>

How do you remove a node from a swarm cluster?

docker node rm <node name>

How do you promote a node from worker to manager?

docker node promote <node name>

How do you change a node from a manager to a worker?

docker node demote <node name>

How do you map a host port to a container port?

-p <host port>:<container port>
Example:
docker run -p 8080:8080 <image name>
